

# Muscat Apps

## **Our Profile:**

The firm Muscat Apps is an Oman company which is launched as a result of joint effort of young talents with an aim to participate in this modern IT revolution. We mainly concentrate on each client's individual needs and guarantee that your work is completed on time, at cost effective through a well-supervised, quality-checked manner. We have gained hands-on experience across all the major programming languages and development platforms including PHP, WordPress, Joomla, Magento, Mobile Operating Systems – BlackBerry, iPhone, Android, and more. We provide excellence in customer service, reliability and satisfaction through integrity, innovation, teamwork and these values tie us all in a common goal and create the foundation upon which the company's welfare rests.

## **Our Expertise:**

Muscat Apps focuses on the client IT, so our clients can focus on their business growth. Our experienced consultant work with you to guide your technology strategies, helping you align them with your business and process strategies. We provide strategic, architectural, operational, and implementation planning for all of your IT needs, over the years we have gained experience in different aspect of IT like:

- ✓ Custom IT solutions that build on your current business and IT infrastructure.
- ✓ Custom mobile application development under professional ANDROID and IOS developers.
- ✓ High-level security structure that protect you and your customers.
- ✓ User- focused tools and training that make implementing new system easy.
- ✓ Long-term management of IT system and infrastructure for clients.
- ✓ Support for existing applications, software including error debugging solutions, additional features integration and so on.

## **Our Products:**

In addition to developing customized solution, we also succeed in becoming local partner for different international companies to resell their products in the Omani market. The following is a brief about these products:

#### 1- Project Management Tool (Open Project)

With shared timelines you can activate the experience and creativity of your entire team to collaboratively create and visualize your project plan. In OpenProject you can easily define the project objectives and specify the work to be done related to this scope. Analyze the required activities and create a detailed plan that shows how and when the project will provide the deliverables defined in the project scope.

#### 2- Data Management Platform (Junar)

Junar data platform lets you transform your hard-to-find and useless data assets into dynamic tables, visualizations, maps, dashboards and APIs – so citizens, developers and companies can re-use them for their interests in a simple way.

#### 3- Survey Management Tool (Question Pro)

World's leading survey creator tool to create online surveys, polls and questionnaires for research on market trends, customers, communities, employees and academics.

#### 4- School Management system (Edu Step Up)

It aims to serve all parties in the educational process (school administration, teacher, student employees & parent). This is done by providing services to each party of the system separately and linking all the frameworks of the organization to their respective programs through the

school administration, which include student's affairs, human resource affairs, the control, accounting affair, school buses, school library, stores, and school clinic.

## 5- Dashboard Management System (TIBCO)

TIBCO Software Inc. (referred to as TIBCO) is the world's leading provider of Business Integration, Analytics and Real-Time Event Processing solutions. TIBCO Software takes businesses to their digital destinations by interconnecting everything in real time and providing augmented intelligence for everyone, from business users to data scientists. This combination delivers faster answers, better decisions, and smarter actions. For nearly 20 years, thousands of businesses around the globe have relied on TIBCO technology to differentiate themselves through compelling customer experiences, optimized assets, and innovative new business models.

TIBCO Software empowers executives, developers, and business users with solutions that make the right data available in real time for faster answers, better decisions, and smarter action.

Over the years, TIBCO Software has brought in products and solutions in the areas of Analytics, EAI, BPM, CEP, BI, ESB, APIs and Cloud integration.

## 6- Library Management System

It is a smart library for any organization. The smart library app is easy to use and bilingual that supports both Arabic and English. The app will be running Android and iOS platforms.

## 7- Information Distributed System (ONELAN)

Digital Signage is a more effective method for communicating your message, providing significant cost savings and flexibility over traditional printed posters and notice boards. With numerous studies showing significant improvements in sales revenue and product recall, Digital signage is now a key tool in solving an increasingly wide range of communication tasks and business problems and has become as important as websites and brochures. ONELAN provides a rich platform on which any organization can build their wider communication strategy, be it a single screen in a foyer, a way finder in a shopping mall or a large global retail network.

## Our Main Project:

### ➤ Oman Suq ([www.omansuq.com.om](http://www.omansuq.com.om))

This company is planning to design and develop a commercial website that targeting mainly nationals and in the future, local non-Omani residents. Also, business will be targeted by this website. Users will be divided into two main categories. The first is sellers who want to sell their products. These users must buy a space for either one or many product(s). The second category is buyers who search for a specific product and there won't be charge. The website is middleware between sellers and buyers. The completion of buying process is done outside the website between them.

Initially, there will be two main type of products that are exhibited in the website, used or new cars and handicrafts. In the future, we are thinking to include other type of products. In addition to the products, the website will provide local individuals and companies to advertise their products and services through flashes and animated images. The spaces will be sold to them using different payment services that the website provides.

### ➤ Samail Zakat Committee Portal (<http://barakat.samailzakat.org.om/>)

The solution is developed based on the Microsoft® MVC framework. The primary objective of Zakat committees is to speed up the study of cases of family's in-need in order to meet their needs and requirements in a timely manner. A large number of volunteers who work for these committees to help carry out their responsibilities, and usually they are distributed throughout the Wilayat to cover all the families wherever they are. The success of these committees' indicators are the number of households that they are helping and the effectiveness of the help they provide, and how fast the committees' response to provide the needs of these families. While trying to increase these indicators, the committees that envisages the accuracy and credibility and the evolution of its performance and how it works to be more effective and faster in response. In this sense, it is imperative on these committees to take advantage of advances in information and communication technologies, and through an easy, flexible and modern electronic platform to enable its members to communicate and interact with each other.
